

Test Card Builder

Information Sheet

www.iccsolutions.com
sales@iccsolutions.com

The ICC Solutions Test Card Builder enables customers to purchase card profiles tailored to their specific testing requirements and combine them within a bespoke TMat solution. Users can then program these profiles onto blank physical cards, which can be distributed throughout their testing environment as needed.

By using the software in conjunction with the supplied physical cards, customers have the flexibility to personalise their test cards with card images of their choice.

If testing requirements change - for example, when testing a different payment brand - the physical cards can be reprogrammed with alternative card profiles, providing a cost-effective and reusable solution.

Includes:

- Software containing your purchased EMV profiles
- 10 x EMV profiles
- 5 x Physical Test Cards
- Card reader / writer unit
- First year support & maintenance- including Helpdesk access

Additional card profiles and physical cards can be purchased separately and are charged on a per-profile and per-card basis.

Please note that card profiles are subject to expiry and must be repurchased when they expire, as expired profiles are not automatically renewed or replaced.

Fully approved EMV
testing for all the major
payment brands:

Amex L3

DPAS L3

INTERAC U.S.

Mastercard L3

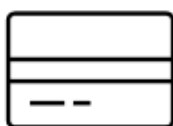

Visa L3
